Exercise E1 Electrostatics I

(written test, approx. 10 % of a 120-minute written test, SS2022)

5. What has been neglected in the picture above? On the picture above, 4 charges are shown. The values of the point charges are: $q_1 = 1 \text{ nC}$, $q_2 = 2 \text{ nC}$, $q_3 = 1 \text{ nC}$, $q_4 = 1 \text{ nC}$. Which value needs E_4 to have to get a resulting force of 0 N on q_0 ?

Path: $q_0 = -1 \text{ nC}$

- $q_1 = -2 \text{ nC}$

Path: $E_4 = 2310.97 \text{ V/m}$

- $\vec{F}_{01} = \left(\begin{array}{c} 19.97 \\ 0 \end{array} \right) \text{ nN}$

In the beginning, the same question is asked. We can calculate the resulting magnitude of the force F_{01} by using the formula $F = k \cdot \frac{q_1 \cdot q_0}{r^2}$ with $k = 8.99 \cdot 10^9 \text{ N} \cdot \text{m}^2 / \text{C}^2$.

$$F_{01} = k \cdot \frac{q_1 \cdot q_0}{r^2} = 8.99 \cdot 10^9 \cdot \frac{1 \cdot 1}{(0.01)^2} = 8.99 \cdot 10^9 \cdot 10^4 = 8.99 \cdot 10^{13} \text{ N}$$

$$F_{02} = k \cdot \frac{q_2 \cdot q_0}{r^2} = 8.99 \cdot 10^9 \cdot \frac{2 \cdot 1}{(0.01)^2} = 1.798 \cdot 10^{14} \text{ N}$$

$$F_{03} = k \cdot \frac{q_3 \cdot q_0}{r^2} = 8.99 \cdot 10^9 \cdot \frac{1 \cdot 1}{(0.01)^2} = 8.99 \cdot 10^{13} \text{ N}$$

$$F_{04} = k \cdot \frac{q_4 \cdot q_0}{r^2} = 8.99 \cdot 10^9 \cdot \frac{1 \cdot 1}{(0.01)^2} = 8.99 \cdot 10^{13} \text{ N}$$

1. Calculate the single forces $\vec{F}_{01}$, $\vec{F}_{02}$, $\vec{F}_{03}$, on the charge q_0 !

Path

First, calculate the magnitude of the forces, like $\vec{F}_{01}$.

The force $\vec{F}_{01}$ is purely on the x -axis and therefore equal to

$$F_{01,x} = F_{01} = k \cdot \frac{q_1 \cdot q_0}{r^2}$$

$$F_{01,x} = 8.99 \cdot 10^9 \cdot \frac{1 \cdot 1}{(0.01)^2} = 8.99 \cdot 10^{13} \text{ N}$$

$$F_{01,x} = 8.99 \cdot 10^{13} \text{ N}$$

$$F_{01,x} = 8.99 \cdot 10^{13} \text{ N}$$

$$F_{01,x} = 8.99 \cdot 10^{13} \text{ N}$$

$$F_{01,x} = 8.99 \cdot 10^{13} \text{ N}$$

$$F_{01,x} = 8.99 \cdot 10^{13} \text{ N}$$

$$F_{01,x} = 8.99 \cdot 10^{13} \text{ N}$$

$$F_{01,x} = 8.99 \cdot 10^{13} \text{ N}$$

$\cdot 10^{-6} \text{ \rm \{ \{VAs\} \over \{m\} \} } = 19.97... \cdot 10^{-6} \text{ \rm \{ \{Ws\} \over \{m\} \} } \quad \&= 19.97... \text{ \rm \mu N} \quad \text{\text{(to the right)}} \quad \end{align*}$

Similarly, we get for $\vec{F}_{02}$ and $\vec{F}_{03}$ $\begin{align*} \vec{F}_{02} = F_{02,x} \quad \&= -28.09... \text{ \rm \mu N} \quad \text{\text{(to the right)}} \quad \\ \vec{F}_{03} \quad \&= -22.47... \text{ \rm \mu N} \quad \text{\text{(to the top left)}} \quad \end{align*}$

For $\vec{F}_{03}$, we have to calculate the x - and y -component.

This is possible, by using the angle α between the line through q_0 and q_3 and the positive x -axis (pointing to the right).

So, α has to be between 90° and 180° . It can be calculated by:

$\begin{align*} \alpha = \arctan(\text{\rm \{ \{-4~cm\} \over \{+2~cm\} \}}) = \pi - 1.1071... = 180^\circ - 63.4...^\circ = 116.6...^\circ \end{align*}$

Based on this, the x - and y -component is: $\begin{align*} F_{03,x} \quad \&= |\vec{F}_{03}| \cdot \cos \alpha = 10.05... \text{ \rm \mu N} \quad \text{\text{(to the left)}} \quad \\ F_{03,y} \quad \&= |\vec{F}_{03}| \cdot \sin \alpha = 20.10... \text{ \rm \mu N} \quad \text{\text{(to the top)}} \quad \end{align*}$
