Exercise E1 Electrostatics I

(written test, approx. 10 % of a 120-minute written test, SS2022)

2. Which has been neglected in the calculation of the resulting force on \$q\_0\$? The picture below shows the arrangement of the point charges \$q\_1, q\_2, q\_3, q\_4\$. Which value needs \$E\_4\$ to have to get a resulting force of \$0\$ N on \$q\_0\$?

Path: \$q\_0 = -1 \cdot 10^{-9}\$ C

- \$q\_1 = -2 \cdot 10^{-9}\$ C

Path: \$E\_4 = 2310.97 \cdot 10^3\$ V/m

- \$\vec{F}\_{01} = \left( \begin{array}{c} 19.97 \\ 0 \\ 0 \end{array} \right) \cdot 10^{-6} \text{ N}\$

In the calculation of the single force components, we can calculate the resulting magnitude of the force \$F\_{01}\$ by the position of the charges. The permittivity is \$\epsilon\_0 = 8.854 \cdot 10^{-12} \text{ As/Vm}\$

$$|\vec{F}_{01}| = \frac{1}{4\pi\epsilon_0} \cdot \frac{|q_1 \cdot q_0|}{r_{01}^2} = \frac{1}{4\pi \cdot 8.854 \cdot 10^{-12} \text{ As/Vm}} \cdot \frac{|-2 \cdot 10^{-9} \text{ C} \cdot -1 \cdot 10^{-9} \text{ C}|}{(0.02 \text{ m})^2} = 19.97 \cdot 10^{-6} \text{ N}$$

Here, this force is purely on the x-axis. The force \$F\_{02}\$ is \$10.05 \cdot 10^{-6} \text{ N}\$ and is purely on the y-axis.

$$|\vec{F}_{02}| = \frac{1}{4\pi\epsilon_0} \cdot \frac{|q_2 \cdot q_0|}{r_{02}^2} = \frac{1}{4\pi \cdot 8.854 \cdot 10^{-12} \text{ As/Vm}} \cdot \frac{|1 \cdot 10^{-9} \text{ C} \cdot -1 \cdot 10^{-9} \text{ C}|}{(0.03 \text{ m})^2} = 10.05 \cdot 10^{-6} \text{ N}$$

$$|\vec{F}_{03}| = \frac{1}{4\pi\epsilon_0} \cdot \frac{|q_3 \cdot q_0|}{r_{03}^2} = \frac{1}{4\pi \cdot 8.854 \cdot 10^{-12} \text{ As/Vm}} \cdot \frac{|1 \cdot 10^{-9} \text{ C} \cdot -1 \cdot 10^{-9} \text{ C}|}{(0.03 \text{ m})^2} = 10.05 \cdot 10^{-6} \text{ N}$$

$$|\vec{F}_{04}| = |E_4| \cdot |q_0| \Rightarrow E_4 = \frac{|\vec{F}_{01}|}{|q_0|} = \frac{19.97 \cdot 10^{-6} \text{ N}}{1 \cdot 10^{-9} \text{ C}} = 19.97 \cdot 10^3 \text{ V/m}$$

$$E_4 = 19.97 \cdot 10^3 \text{ V/m} = 19.97 \cdot 10^3 \frac{\text{V}}{\text{m}}$$

$$E_4 = 19.97 \cdot 10^3 \frac{\text{V}}{\text{m}} = 19.97 \cdot 10^3 \frac{\text{V}}{\text{m}}$$

$$E_4 = 19.97 \cdot 10^3 \frac{\text{V}}{\text{m}}$$

$$E_4 = 19.97 \cdot 10^3 \frac{\text{V}}{\text{m}}$$

1. Calculate the single forces \$\vec{F}\_{01}\$, \$\vec{F}\_{02}\$, \$\vec{F}\_{03}\$, on the charge \$q\_0\$!

Path

First, calculate the magnitude of the forces, like \$\vec{F}\_{01}\$.

The force \$\vec{F}\_{01}\$ is purely on the \$x\$-axis and therefore equal to

$$F_{01,x} = \frac{1}{4\pi\epsilon_0} \cdot \frac{|q_1 \cdot q_0|}{r_{01}^2} = \frac{1}{4\pi \cdot 8.854 \cdot 10^{-12} \text{ As/Vm}} \cdot \frac{|-2 \cdot 10^{-9} \text{ C} \cdot -1 \cdot 10^{-9} \text{ C}|}{(0.02 \text{ m})^2} = 19.97 \cdot 10^{-6} \text{ N}$$

$$F_{01,x} = \frac{1}{4\pi\epsilon_0} \cdot \frac{|q_1 \cdot q_0|}{r_{01}^2} = \frac{1}{4\pi \cdot 8.854 \cdot 10^{-12} \text{ As/Vm}} \cdot \frac{|-2 \cdot 10^{-9} \text{ C} \cdot -1 \cdot 10^{-9} \text{ C}|}{(0.02 \text{ m})^2} = 19.97 \cdot 10^{-6} \text{ N}$$

$$F_{01,x} = \frac{1}{4\pi\epsilon_0} \cdot \frac{|q_1 \cdot q_0|}{r_{01}^2} = \frac{1}{4\pi \cdot 8.854 \cdot 10^{-12} \text{ As/Vm}} \cdot \frac{|-2 \cdot 10^{-9} \text{ C} \cdot -1 \cdot 10^{-9} \text{ C}|}{(0.02 \text{ m})^2} = 19.97 \cdot 10^{-6} \text{ N}$$

$$F_{01,x} = \frac{1}{4\pi\epsilon_0} \cdot \frac{|q_1 \cdot q_0|}{r_{01}^2} = \frac{1}{4\pi \cdot 8.854 \cdot 10^{-12} \text{ As/Vm}} \cdot \frac{|-2 \cdot 10^{-9} \text{ C} \cdot -1 \cdot 10^{-9} \text{ C}|}{(0.02 \text{ m})^2} = 19.97 \cdot 10^{-6} \text{ N}$$

$$F_{01,x} = \frac{1}{4\pi\epsilon_0} \cdot \frac{|q_1 \cdot q_0|}{r_{01}^2} = \frac{1}{4\pi \cdot 8.854 \cdot 10^{-12} \text{ As/Vm}} \cdot \frac{|-2 \cdot 10^{-9} \text{ C} \cdot -1 \cdot 10^{-9} \text{ C}|}{(0.02 \text{ m})^2} = 19.97 \cdot 10^{-6} \text{ N}$$

$\cdot 10^{-6} \left\{ \frac{VAs}{m} \right\} = 19.97... \cdot 10^{-6} \left\{ \frac{Ws}{m} \right\} \quad \&= 19.97... \left\{ \frac{\mu N}{\mu N} \right\} \quad \text{\texttt{(to the right)}} \end{align*}$

Similarly, we get for  $\vec{F}_{02}$  and  $\vec{F}_{03}$

$$\vec{F}_{02} = F_{02,x} \quad \&= -28.09... \left\{ \frac{\mu N}{\mu N} \right\} \quad \text{\texttt{(to the right)}} \quad \&= -22.47... \left\{ \frac{\mu N}{\mu N} \right\} \quad \text{\texttt{(to the top left)}} \end{align*}$$

For  $\vec{F}_{03}$ , we have to calculate the  $x$ - and  $y$ -component.

This is possible, by using the angle  $\alpha$  between the line through  $q_0$  and  $q_3$  and the positive  $x$ -axis (pointing to the right).

So,  $\alpha$  has to be between  $90^\circ$  and  $180^\circ$ . It can be calculated by:

$$\alpha = \arctan\left(\frac{-4\text{ cm}}{+2\text{ cm}}\right) = \pi - 1.1071... = 180^\circ - 63.4...^\circ = 116.6...^\circ$$

Based on this, the  $x$ - and  $y$ -component is:

$$F_{03,x} \quad \&= |\vec{F}_{03}| \cdot \cos \alpha = 10.05... \left\{ \frac{\mu N}{\mu N} \right\} \quad \text{\texttt{(to the left)}} \quad \&= |\vec{F}_{03}| \cdot \sin \alpha = 20.10... \left\{ \frac{\mu N}{\mu N} \right\} \quad \text{\texttt{(to the top)}} \end{align*}$$
